Design Doc
Youtube to Spotify App

Features: Finds liked videos on Youtube account, creates playlist named YTtoSpotify containing songs that are on Youtube that are also available on Spotify.

How to implement:
Step 1: Create Python script to create a playlist on Spotify, this same script will also add liked youtube videos to that playlist.

Step 2: Create another python or json file to receive input necessary user information (Youtube account info/spotify account info) to make this work.

Step 3: Create Python script to inform user/developer about any exceptions that are occurring.
